Preamble and Objective

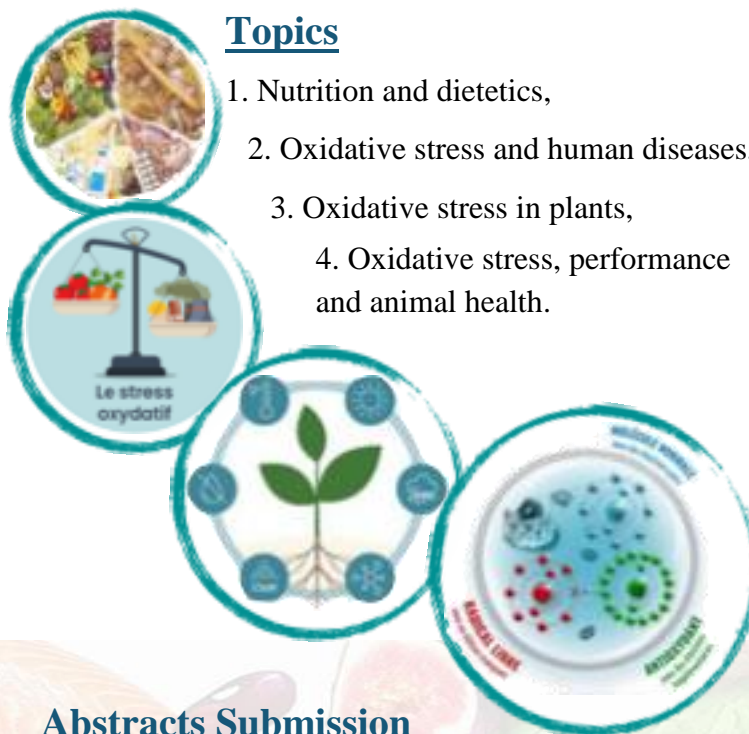

The concept of oxidative stress dates back to 1985. It has been described by SIES as alteration of the oxidant/antioxidant balance in favor of the oxidants, including oxygen and nitrogen reactive species.

Afterward, the oxidative stress has been associated with a range of human, animal, and plant pathologies. Then, recent research has focused on dissecting the implications of the factors involved in this imbalance and exploring preventive and corrective strategies. Thus, it has been uncovered that healthy and balanced nutrition contributes significantly to preventing the oxidative stress and reducing its complications.

This event aims to bring together scientists, academics and professionals interested in the oxidative stress and explore new frontiers, i.e., biomarkers, preventive measures and therapeutics.

Topics

1. Nutrition and dietetics,
2. Oxidative stress and human diseases,
3. Oxidative stress in plants,
4. Oxidative stress, performance and animal health.

Journals Selected articles

- Ukrainian Food Journal- Category B- National University of Food Technologies. Ukraine.
